

As ASEN ALUMINUM; Our main goal is to increase energy efficiency, continuously improve our energy performance, reduce our greenhouse gas emissions and act in accordance with sustainable development principles.

Our energy management system is carried out in accordance with the requirements of the ISO 50001 standard and national/international legislation.

Accordingly, our energy policy:

- In order to continuously improve our energy performance, we encourage the use of technologies that will increase energy efficiency in production processes and supporting activities. We regularly review our energy targets and indicators and integrate the performance results into the management system.
- We aim to minimize our carbon emissions by increasing the sustainable use of renewable energy sources and reducing our fossil fuel dependence.
- We fully comply with all national and international legal obligations regarding energy use, consumption, efficiency and greenhouse gas emissions, the requirements of the ISO 50001 standard and other stakeholder commitments.
- We organize trainings that will increase the energy awareness of all our employees and make energy efficiency an integral part of our corporate culture.
- We regularly review our energy targets and indicators, monitor our performance with data-driven monitoring, measurement and reporting, and evaluate opportunities for continuous improvement.
- We integrate energy efficiency into our supply chain, prioritize the supply of energy-efficient equipment, services, and materials, and collaborate with energy-conscious business partners.

As ASEN ALUMINUM; We are committed to using energy resources efficiently, environmentally friendly and economically in all our activities from production to administrative processes, to continuously improve our energy performance and to increase the effectiveness of our energy management system, and to make energy efficiency an integral part of our corporate culture.

H. GOKHAN ASLAN
General Manager
